TCLEOSE
Cybercrime Investigator Certification

Course Description: This course is designed to provide Texas Peace Officers with the knowledge and skills successfully investigate Cybercrime (also known as computer crime).

Cybercrime is an emerging trend that is rapidly growing in scope and frequency. Most officers are not prepared to deal with Cybercrime due to the complex and intricate nature of the investigations and the rapid advancement of new technology. Our society continues to become more "plugged in", and the public expects law enforcement to keep pace with how new technology affects the investigative process and by extension, crime in general.

This course was created to provide peace officers with an understanding of some of the types of crimes they will encounter in their communities as well as the process for their investigation. Upon successful completion of the course (TCLEOSE 3310) students will receive 40 hours TCLEOSE credit and are eligible to apply for the TCLEOSE Cybercrime Proficiency Certificate.
